

60th
1958-2017

North Carolina Industrial Ventilation

Course

Receive the
29TH
EDITION
INDUSTRIAL
VENTILATION
MANUAL

May 1-5, 2017

Holiday Inn Downtown Raleigh, NC

OPTIONAL WORKSHOP-MAY 5

Current Issues in Industrial Ventilation

- Combustible Dust 2017
- New & Innovative Issues in Filtration & Industrial Ventilation Design

Industrial Ventilation Design or Industrial Ventilation System
Diagnosis & Troubleshooting Certificate Programs Included!

North Carolina Industrial Ventilation Course in cooperation with

University of North Carolina-Chapel Hill, School of Public Health
North Carolina Occupational Safety & Health Education & Research Center
NC Department of Labor, Division of Occupational Safety & Health

Visit www.ncindustrialventilation.com

Who should attend?

- Engineers and Designers
- Safety Personnel
- Industrial Hygienists
- Consultants
- Maintenance Personnel

60th Annual North Carolina Industrial Ventilation Course

May 1-5, 2017 • Holiday Inn Downtown Raleigh Hotel • Raleigh, NC

ELEMENTS OF THE PROGRAM

CLASSROOM SESSIONS — MAY 1-4

The problem sessions present real world situations and are sequenced in a manner to take advantage of skills the students acquire.

In order to facilitate computations in the problem sessions, students are required to bring a calculator.

OPTIONAL WORKSHOP—MAY 5

Morning Session: Combustible Dust 2017

- NFPA Representative to Speak
- Updates on NFPA 652, 484, and 654
- Innovative Performance-based Alternative Solutions
- Basics of Combustible Dust Technologies

Afternoon Session: New and Innovative Issues in Filtration and Industrial Ventilation Design

- Governmentally Sanctioned Ventilation Designs and VS Plate Designs
- New ASHRAE Test Criteria for Dust Collector Designs
- Computational Fluid Dynamics for Dummies

VENTILATION SYSTEM LABS

The Course has several ventilation systems that are used for demonstration purposes. These systems consist of ducts, various hoods, variable speed fans, stackcaps, and sound attenuators. These 'hands-on' exercises to measure flow and pressure are key to the program. Measurement includes: pitot tube traverse to determine flow rate, hood static pressure, duct pressure drop, and simulation of fan and system curves. The Diagnosis and Troubleshooting Section also uses a system to practice basic troubleshooting skills.

FOUNDERS BANQUET

Is held Tuesday evening after classes and is an opportunity to meet people early in the week. Dinner will be served on the 20th floor of the Holiday Inn Downtown Raleigh, overlooking the city.

INDUSTRIAL VENTILATION CERTIFICATE COURSE

The North Carolina Industrial Ventilation Course in collaboration with the University of North Carolina, Occupational Safety and Health Research Center has established two Certificate courses in Industrial Ventilation. Upon completion of the course individuals will be awarded a **Certificate in Industrial Ventilation Design** or **Certificate in Industrial Ventilation System Diagnosis & Troubleshooting**, and a plaque from the University of North Carolina, Occupational Safety and Health Education and Research Center.

Program requirements:

- Successfully complete two levels of courses offered at the North Carolina Industrial Ventilation Course. Each level will be four days in length.
- Step One: Complete the first (Fundamentals) level, a four day course in applied industrial ventilation techniques including

Hood & Duct Design, Fan Basics, Introduction to Air Control Devices (Baghouses, Scrubbers, ESP's, etc.) and Fundamental Industrial Hygiene Issues and how they affect exposure and ventilation system design.

- Following the completion of the basic course the student has a choice in the second year to continue with more detailed system design (leading to a **Certificate in Industrial Ventilation Design** or to pursue a course of System Diagnosis and Troubleshooting (leading to a **Certificate in Industrial Ventilation System Diagnosis and Troubleshooting**. Each Certificate will be issued from the University of North Carolina-Chapel Hill).

The certificate program is included in the cost of the program. For more information about the Certificate Program please contact Connie McElroy-Bacon at (919) 233-8400 or go to the North Carolina Industrial Ventilation Course web site at www.ncindustrialventilation.com.

PLAN OF INSTRUCTION

Fundamentals of Industrial Ventilation Course (8 Modules)

Ventilation I: Fundamentals of Ventilation and Industrial Hygiene I

Requires some basic algebra skills to solve problems. Includes an introduction to flow and pressure in a duct system and how they can be measured and provides an introduction to the effects of air density on duct sizes and selection of proper fans and motors. It also includes a primer on Industrial Hygiene in the workplace.

Hood Design

The first in-depth module looks at: hood classifications and types, capture velocities, air distribution over a large area, hood "losses", air volume requirements for different hood designs and problem sets to calculate hood flow requirements and losses and how this impacts the horsepower and energy in a system.

Duct Component Design

An in-depth look at the parts (elbows, fittings, ductwork) that define the system including the effects of static, velocity and total pressure, hood static pressure, hood and ductwork losses and a lab demonstration.

System Design I

Building on the skills from the first modules, this session introduces the use of the ACGIH Calc Sheet to design and predict the operation of a system, including how to size a fan and calculate horsepower.

System Design II

A second session looking at temperature and other density effects and how they influence the design of system duct and fans.

System Components - Fans and Collectors

Introduces the student to basic Air Control Device and Fan Design; includes nomenclature to specify equipment and the parameters for proper design.

System Design III

Combining all of the building blocks of the system, the student will begin to look at Industrial Ventilation design as a whole. This includes more detailed use of the ACGIH calculation sheet and Manual to solve practical problems from the workplace.

Industrial Ventilation Design Courses (Eight Modules)

Prerequisite: for certificate program in Industrial Ventilation Design: Completion of Fundamentals Level taken at N.C. Industrial Ventilation Course. Participants should be able to:

- Utilize *ACGIH Industrial Ventilation Manual*
- Understand the Velocity Pressure Method of design
- Utilize the ACGIH calculation sheet

Ventilation II: Review of Fundamentals

An intense review of the Fundamentals (First Year) course, this module does a quick revisit of basic formulae of system design ($Q=VA$, Hood Static Pressure, Effects of Density), sizing of duct, system pressure, and calculation sheet review. This module is intended for attendees who have completed the Fundamentals Course or have over five years ventilation design experience.

Ventilation III: Physics of Non-Standard Conditions

This course covers basic psychrometrics, the perfect gas equation and sample problems explaining both concepts. Subjects include dry bulb and wet bulb temperature, dew point, enthalpy.

System Design IV

This module focuses on using the calculation sheet and techniques to solve problems involving non-standard air and mixing of hot and cold or dry and wet air streams.

Fans 201

This segment is a continuation of information provided in the Fundamentals Course module and focuses on system effects and issues that may improve or impede operation. The module includes demonstration and practical problems to solve.

System Design V

This module adds detailed design issues including the implementation of system effects losses, adiabatic cooling and stack design.

Energy and Cost

Systems use large amounts of horsepower to convey dust and gases. This module provides tools to calculate the initial system costs as well as operating costs (power, maintenance, replacement air, etc.) and includes sample problems.

System Design VI (8 hours - two modules)

Includes "real world" example to combine the techniques in the course. This will use all the tools and techniques taught previously in the week.

Diagnosis and Troubleshooting Courses (Eight Modules)

Prerequisite: for the Certificate Program in Industrial Ventilation System Diagnosis and Troubleshooting: completion of Fundamentals Level taken at N.C. Industrial Ventilation Course

- Utilize System Diagnosis and Troubleshooting Manual
- More practical applications with less math
- Requires calculator and some problem solving

Measuring and Monitoring System Performance I

Provides basic insight into requirements including documentation, use of fan performance curves and system measurements to monitor operations. Minimal math required.

Measuring and Monitoring System Performance II

This module builds on the basic data gathering methods to provide hands on experience on system data comparing baseline information with changes that may occur over the life of the system.

Monitoring & Maintenance I

This module will cover extensive lab procedures to evaluate fan operation (fan and system curves) as well as effects of varied pressures during operation (i.e. baghouse delta-P, etc.) and an introduction to effects of changes in density on results of measurements.

Practical System Troubleshooting I

In this module, the participant will look at comparison data to evaluate the changes to a system over operation.

Practical System Troubleshooting II (8 hours - two modules)

This module is a continuation of the practical problem solving as systems are altered over their operational life.

PROGRAM STAFF

ACKERSON, ROSS, Air Solutions, Inc., St. Louis, MO

BOSTON, KIRT, Donaldson Co., Minneapolis, MN*

CURRAN, PAT, NC Division of Public Health (Retired), Raleigh, NC*

DIESTLER, MATT, IVI North, Greenville, WI

GIGUERE, MARY, NC Division of Public Health (Retired), Raleigh, NC

GUNNELL, DOUGLAS L., Gunnell Engineering Services, Winston-Salem, NC*

GRESHAM, NEIL, Saint-Gobain Corp., Oxford, NC*

GRUBB, GREGG, Grubb Industrial Hygiene Services, LLC, Grand Ledge, MI *

HALE, JONATHAN, Air Systems Corp., Clemmons, NC*

HERRING, ROMIE, RH Consulting LLC, Raleigh, NC*

STALLINGS, JEFF, Stallings Engineering, Winston-Salem, NC

STROHSCHIEIN, SUSIE, Air Systems Corp., Clemmons, NC

SULLIVAN, PAUL, NC-OSHA, Charlotte, NC*

TRAMM, LEO, TRC Environmental Corp., Milwaukee, WI*

Registration/pick up course materials: MONDAY, MAY 1 | 7:30-8:00 AM | HOTEL LOBBY

LUNCH: MONDAY - FRIDAY | 12:00-1:00 PM

	Monday*	Tuesday	Wednesday	Thursday
Fundamental Ventilation Skills				
8:00 – 12 noon	Fundamentals of Ventilation & Industrial Hygiene	Duct Component Design	System Components - Fans and Collectors	System Design III
1:00 – 5:00 PM	Hood Design	System Design I	System Design II	System Design III
Advanced Design				
8:00 – 12 noon	Ventilation II: Review of Fundamentals	Fans 201	Energy & Cost	System Design VI
1:00 – 5:00 PM	Ventilation III: Physics at Non-Standard Conditions	System Design IV	System Design V	System Design VI
Diagnosis and Troubleshooting				
8:00 – 12 noon	Ventilation II: Review of Fundamentals	Measuring & Monitoring System II	Monitoring & Maintenance I	Practical System Troubleshooting II
1:00 – 5:00 PM	Measuring & Monitoring System Performance I	The Fan and System	Practical System Troubleshooting I	Practical System Troubleshooting II

* **7:00 PM Monday:** Math Terminology Update

OPTIONAL WORKSHOP

FRIDAY: 8:00 AM–3:00 PM

Morning Session:

Combustible Dust 2017

- NFPA Top Representative to Speak
- Updates on NFPA 652, 484, and 654
- Innovative Performance-based Alternative Solutions
- Basics of Combustible Dust Technologies

Afternoon Session: New and Innovative Issues in Filtration and Industrial Ventilation Design

- Governmentally Sanctioned Ventilation Designs and VS Plate Designs
- The New ASHRAE Test Criteria for Dust Collector Designs
- Computational Fluid Dynamics for Dummies

Congratulations to those receiving certificates in May 2016:

CERTIFICATE IN INDUSTRIAL VENTILATION DESIGN RECIPIENTS

- Chris Bagley, Elite Comfort Solutions
- Catherine Foti, Clean Air Company
- Jerold Grabiner, Phillip Morris, USA
- Bruce Henricks, Production Systems, Inc.
- Johnathan Jacques, Portsmouth Naval Shipyard (Kittery, ME)
- John Rennockl, CLARCOR Industrial Air
- Mark Skelton, BAE Systems
- Evan Vigue, Portsmouth Naval Shipyard (Kittery, ME)

CERTIFICATE IN INDUSTRIAL VENTILATION DIAGNOSIS & TROUBLESHOOTING RECIPIENTS

- Craig Brennecke, Kimberly Clark
- Chantay Carruth, EP Minerals, LLC
- Jean Dochterman, Kimberly Clark
- Tim Sellin, IVI, Inc.

GENERAL INFORMATION

This Course was established to promote good ventilation practices and design techniques throughout industry and will help you learn to evaluate and/or design a ventilation system.

Classroom problems solved using the Velocity Pressure Method of calculation.

Classroom sessions and morning registration on May 1, will be held at the Holiday Inn Downtown Raleigh, 320 Hillsborough St., Raleigh, NC. with the first session beginning at 8:00 am. The optional workshop will be held on Friday, May 5, 8:00 AM.

TUITION

The cost for Level I Fundamentals of Ventilation, Level II Advanced Ventilation Design OR Level II System Diagnosis and Troubleshooting is \$1,545 per person. The three levels are taught concurrently May 1-4.

Tuition for the optional workshop on Friday, May 5, is \$295 per person.

Please call about company discounts for 3 or more Course registrants.

Course registration fees include the 29th edition ACGIH Industrial Ventilation Manual or System Diagnosis & Troubleshooting Manual, all course materials (problems, calculations sheets), breaks, four continental breakfasts, four lunches, and the Founders Dinner on Tuesday, May 2. The Friday workshop registration fee includes handouts, continental breakfast, lunch and breaks.

The two year Certificate Program is included in the cost of the course.

MAINTENANCE POINTS—The NC Ventilation Course contains 30 hours of technical contact time and is eligible for an estimated 4.0 ABIH CM Points. The optional workshop contains an additional

6 hours of technical contact time and is eligible for an estimated 1 ABIH CM Credit.

PROFESSIONAL DEVELOPMENT HOURS (PDHs)—The Industrial Ventilation Course (S-0213P) is an approved sponsor of continuing competency activities for North Carolina Professional Engineers and Registered Land Surveyors (30 Contact Hours).

ACCOMMODATIONS—Rooms have been set aside at Holiday Inn Downtown Raleigh for participants of this Course, but their availability cannot be guaranteed past March 30. Lodging is NOT included in your registration fee. Please make your own reservation directly with the Holiday Inn Downtown Raleigh. To receive your special rate of \$84/night (plus tax), please state that you will be attending the **Industrial Ventilation Course**.

HOLIDAY INN DOWNTOWN RALEIGH HOTEL
320 Hillsborough St., Raleigh, | NC 27603 919-832-0501

PARKING—On-site parking is available for Holiday Inn Downtown Raleigh overnight guests at \$7.00/night. There is free parking for drive in attendees.

CANCELLATION—The full registration fee or an organization purchase order is due at the time of registration. In the event the participant cancels, a written notice is required. A twenty-five dollar (\$25.00) fee will be charged for cancellation. No reimbursement can be made if cancellation occurs within 7 business days of the program, or if the participant fails to attend.

OTHER VENTILATION COURSES

The 66th Annual Michigan Industrial Ventilation Conference will be held in Michigan in February 12-17, 2017. For information please call **517-819-5986**

The West Coast Industrial Ventilation Conference will be held in November 2017 in Santa Ana, CA. For information, call **909-336-0420**.
